EDUCATION

Queens College, City University of New York

Bachelor of Science in Computer Science

May 2028

GPA: 3.5 / 4.0

Coursework: Object Oriented Programming in C++/Java Computer Org and Assembly Lang, Discrete Structures, Computer Architecture, Data Structures and Algorithms, Design and Analysis of Algorithms

TECHNICAL SKILLS

Programming Languages: C/C++, Lua, Go, Python, C# JavaScript, Rust, Java, SQL, x86/x86_64 Assembly

Libraries/Frameworks: ImGui, Zydis, LIEF, Flask, SolidJS, Crow, Win32, LLVM, PHNT, nlohmann-json, chromedp, goquery, FastMCP

Tools: Visual Studio, MSBuild/MSVC, vcpkg, GCC/G++, CMake, Git, Docker, CI/CD Tooling, Linux, PostgreSQL, MySQL, Android Studio, Claude Code, Codex, Oh My Pi

EXPERIENCE

YorkMG

Software Engineering Intern

June 2025 – August 2025

New York, NY

- Developed a real-time door alert system to monitor **100+** patients across assisted living facilities, by implementing event-driven tracking and centralized logging, **reducing manual search time** and **improving response speed** for staff
- Built a digital sign-in kiosk system deployed across **4** facilities to log visitor entries and exits, **replacing paper-based workflows** and **improving record accuracy** while **eliminating manual log maintenance**
- Automated intake and routing of support forms and job requests using Zapier integrations, **reducing response time** from **hours to seconds** and **significantly decreasing** manual workload for staff

PROJECTS

Door Alert System | *Python, Flask, MySQL, Docker, HTML/CSS, RFID Integration, DXAccess, Web App Interface*

[GitHub](#)

- Developed a **real-time** RFID-based **monitoring** system using **Python (Flask)** to track **100+** patients across assisted living facilities, implementing **event-driven alerting** for unauthorized exits
- Integrated with **DXAccess** by parsing and normalizing unstructured access logs, extracting card swipe events to build a usable event stream for real-time tracking
- Built a web-based alerting interface using **HTML/CSS/JavaScript** with a **MySQL** backend for persistent event storage and real-time monitoring of patient activity

recompiler.nisans.dev | *Go, C++, TypeScript, SolidJS, Vite, Datadog APM/RUM, Terraform, GitHub Actions*

[GitHub](#)

- Built a **full-stack observability layer** for the Go and SolidJS application using **Datadog APM, Continuous Profiler, Browser RUM, and structured JSON logs** with correlated trace and span IDs
- Instrumented HTTP requests and binary-analysis workflows with **request, queue, latency, throughput, and error telemetry**, producing log-based metrics for **p50/p95 performance monitoring**
- Provisioned monitoring infrastructure with **Terraform**, including **6 Datadog metrics, 4 monitors, a service dashboard, synthetic health testing, and a 99% API-success SLO**

Code for All Events API | *Go, REST API, Chromedp, GoQuery, JSON*

[GitHub](#)

- Developed a **Go REST API** that scrapes dynamically rendered university event pages, extracts and normalizes event metadata, and serves **structured JSON endpoints** for integration with the Code for All website
- Engineered a scheduled refresh and caching pipeline using **Chromedp** and **GoQuery**, reducing repeated scraping and improving **API response latency and reliability** when upstream pages were unavailable

Nocturne | *C++, x86_64 Assembly, Zydis, LIEF, Windows PE, Visual Studio*

[GitHub](#)

- Grew the project to **150+** GitHub stars and **15+** forks, demonstrating strong **interest** from the security and systems-programming community
- Engineered the translation and runtime system with **30+** instruction handlers, native function-call support, thread-safe execution, and **SDK/CLI workflows** for **protecting individual functions** or **executable regions**

LEADERSHIP & ACTIVITIES

Code for All, Queens College

Workshop Developer

January 2026 – Present

New York, NY

- Developed technical workshop curricula** for a campus coding organization serving **2,000+** students, translating complex programming and systems concepts into accessible lessons
- Designed and delivered** a hands-on reverse-engineering workshop covering memory, CPU execution, the stack and heap, debugging, and program behavior
- Led live binary-analysis** demonstrations, showing students how to inspect compiled programs and trace execution while explaining my technical reasoning and problem-solving process
